Art Unit: 3742

Claim Rejections - 35 USC § 102

Claims 9-11 and 14 are rejected under 35 U.S.C. 102(b) as being anticipated by FR2521408 (FR'408).

Referring to Figs. 1-3, the abstract, and claim 3, FR' discloses a portable drying and heating system as claimed, including heating elements 6, 7 in the walls, AC and DC power accommodation 8-11 inherently requiring electrical conversion means, and two moisture vents 15.

Claim Rejections - 35 USC § 103

Claims 1-3 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over FR'408 in view of U.S. Pat. 5569401 (US'401).

The claims differ from FR'408 only in calling for a center panel in the compartment; however, US'401 discloses, at Figs. 2, 4, & 9, and col. 2, lines 34-56, a center panel 22 comprising a heating element 20 (20' or 20"). It would have been obvious to form a center panel in the case of FR'408, after the manner of US'401, to more efficiently heat the contents of the case when a plurality of items are placed therein, such as ski boots.

Claims 13 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over FR'408 in view of U.S. Pat. 4543471 (US'471).

The claims differ from FR'408 only in calling for a thermostat and an adjustable strap, noting that FR'408 does disclose a strap without discussing adjustability.

US'471 discloses, at col. 3, lines 20-21, the use of a thermostat to control temperatures in a portable heated case, which although intended to carry food rather than sports equipment shares identically the issue of temperature control in a portable heated case. It would have been obvious to adapt the thermostat control means of US'471 to the heated case of FR'408 to enhance temperature control and versatility. Moreover, strap adjustability does not patentably distinguish the claimed invention from the prior art; strap adjustability is obvious because it has long been conventional means to allow comfortable carrying by persons of various heights.

Claims 15 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over FR'408 in view of U.S. Pat. 2617012 (US'012).

The claims differ from FR'408 only in calling for combined AC/DC battery power. However, US'012 discloses the use of exactly this in a sports equipment case. It would have been obvious to adapt the power supply means of US'012 to the case of FR'408 to allow use in diverse environments, with or without mains or automobile battery power.

Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over FR'408 in view of US'401, as applied to claims 1-3 and 6 above, and further in view of US'471.

The claims differ from FR'408 in view of US'401 in calling for a thermostat; however, US'471 discloses, at col. 3, lines 20-21, the use of a thermostat to control temperatures in a portable heated case, which although intended to carry food rather than sports equipment shares identically the issue of temperature control in a portable

Art Unit: 3742

heated case. It would have been obvious to adapt the thermostat control means of US'471 to the heated case of FR'408 in view of US'401 to enhance temperature control and versatility.

Claims 7 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over FR'408 in view of US'401, as applied to claims 1-3 and 6 above, and further in view of US'012.

The claims differ from FR'408 in view of US'401 in calling for combined AC/DC battery power. However, US'012 discloses the use of exactly this in a sports equipment case. It would have been obvious to adapt the power supply means of US'012 to the case of FR'408 in view of US'401 to allow use in diverse environments, as discussed above.

Allowable Subject Matter

Claims 4 and 12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph M Pelham whose telephone number is 571-272-4786. The examiner can normally be reached on M-F 7:30 AM to 4:00 PM.

The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
